

### DIN Rail Mount 17.5 mm MUS/MUSF 260 AC/DC Part number 84872142

- Control relays monitoring their own power supply
- MUS : Over/undervoltage control Selectable latching (memory) function

  - MUSF: Over/undervoltage control

  - Adjustable time delays

- Control in 50 Hz, 60 Hz or DC
- True RMS measurement
- LED status indication

#### Supply

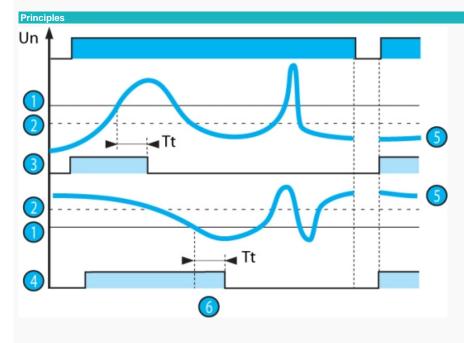

#### Inputs and measuring circuit

| Hysteresis | $5\rightarrow 20$ % of threshold (MUS) |
|------------|--|
|            | 3 % (fixed) of threshold (MUSF)        |

#### **General characteristics**

#### Accessories

| Description                                 | Code     |
|---|----------|
| Removable sealable cover for 17.5 mm casing | 84800000 |

The under or overvoltage threshold value is set by a graduated potentiometer by reading the Un scale to be monitored directly.

The hysteresis is set by a graduated potentialmeter by reading the Uniscale to be infollibred directly.

The hysteresis is set by a graduated potentialmeter from 5 to 20 % of the preset threshold. The hysteresis value cannot be higher than the extremes of the measurement range.

In overvoltage mode, if the controlled voltage exceeds the preset threshold for longer than the time set on the front face (0.1 to 10 s), the output relay opens and LED R is extinguished. During the time delay, this LED flashes.

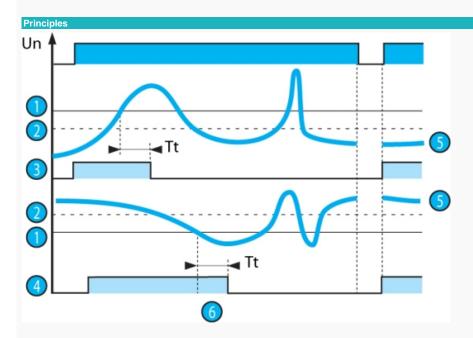

Once the voltage falls below the threshold value minus the hysteresis, the relay closes instantaneously.

In undervoltage mode, if the controlled voltage falls below the preset threshold for longer than the time set on the front face (0.1 to 10 s), the output relay opens and LED R is extinguished. During the time delay, this LED flashes.

Once the voltage rises above the threshold value plus the hysteresis, the relay closes instantaneously.

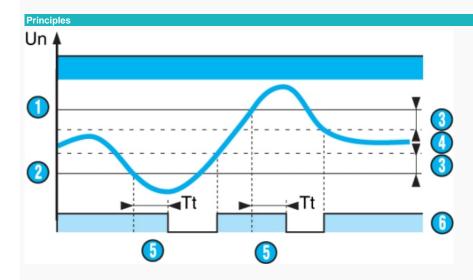

| N° | Legend    |
|----|-----------|
| •  | Threshold |

| <b>②</b> | Hysteresis                       |
|----------|----------------------------------|
| <b>③</b> | Overvoltage function relay       |
| •        | Undervoltage function relay      |
| <b>⑤</b> | Controlled signal                |
| 6        | Delay on threshold crossing (Tt) |

If "with memory" mode has been selected, the relay opens and stays in this position when threshold crossing is detected. The power supply must be disconnected to reset the product.

| No       | Legend                           |

| 6        | Controlled signal                |
| <b>6</b> | Delay on threshold crossing (Tt) |

MUSF relays operate in window mode: they check that the controlled voltage stays between a minimum and maximum threshold.

The under and overvoltage threshold values are set by two graduated potentiometers by reading the Un scale to be monitored directly.

The hysteresis is fixed, value: 3 % of the preset thresholds.

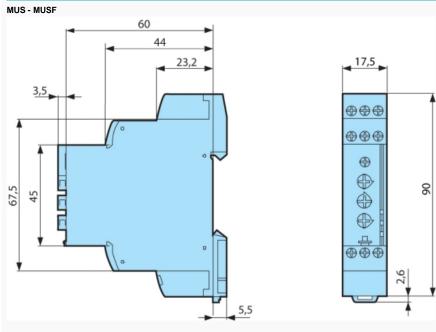

If the controlled voltage exceeds the preset upper threshold, or falls below the preset lower threshold for longer than the time set on the front face (0.1 to 10 s), the output relay opens and LED R is extinguished. During the time delay, this LED flashes.

Once the voltage returns to below the upper threshold value minus the hysteresis, or above the lower threshold value plus the hysteresis, the relay closes instantaneously.

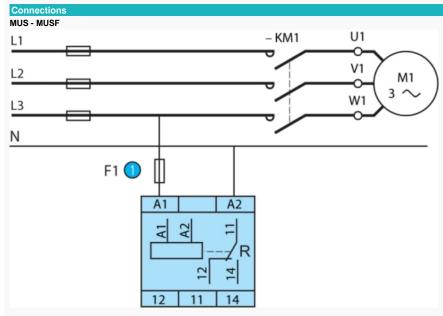

When the unit is powered up with a measured fault, the relay stays open.

## **Product adaptations**

Customisable colours and labels

Fixed threshold in the generic measurement range

Fixed or adjustable time delay

Adjustable hysteresis

Adaptations dedicated to MUS 12 DC, MUS 80 AC, MUS 260 AC:

Possible to delete settings

Adjustable fixed hysteresis
