

DIRIS B

Power Monitoring Device - PMD

measurement, monitoring and analysis with smart sensors - modular format

Configuration
with Easy Config System.

Function

The DIRIS B is a power monitoring device in a modular format that communicates via RS485. The 4 RJ12 independent current inputs of the unit allow it to manage several types and numbers of circuits: for example, 4 single-phase loads or 1 three-phase load + 1 single-phase load.

The DIRIS B is connected to current sensors (RJ12 connection) suitable for all types of installation: solid-core TE, split-core TR/ITR, and flexible TF current sensors.

Advantages

Plug & Play

A quick RJ12 connection makes wiring easy and reliable and prevents wiring errors. Automatic addressing and configuration (communication address, load type, type and ratio of current sensor) simplify implementation and save time.

Class 0.5 in accordance with standard IEC 61557-12

- Class 0.2 for the PMD alone.
- Class 0.5 for the overall measurement chain from 2 % to 120 % of nominal current (associated with TE/ITR/TF current sensors).

Multi-circuit

- 4 current measurement inputs enable a multi-circuit configuration to optimise the number of PMDs per installation.

Smart

The DIRIS B can be connected to:

- A remote DIRIS D-30 screen for displaying measurement and metering data,
- DIRIS Digiware M-50/M-70 gateways for centralisation and communication of data via Ethernet. The M-70 gateway embeds a WEBVIEW-M Web server for remote viewing of measurement data,
- Optional modules for more communication options including a second RS485 port or PROFIBUS DP protocol. Digital or analogue input/output modules and temperature inputs can also be connected.

Accessories

Sealing kit for DIRIS B

Secures the wiring of the PMD.

USB configuration cable (2 m)

- Advanced configuration of DIRIS B can be achieved by Ethernet using EASY CONFIG software, or by direct USB connection.

Optional modules

DIRIS O

Optional modules (4 max.)*

- Digital inputs/outputs
- Analogue inputs/outputs
- Temperature inputs
- Communication protocols

* maximum 4 optional modules with maximum 1 temperature module and 1 communication module (Modbus, PROFIBUS).

DIRIS O-iod

- 2 digital inputs enable metering pulses to be retrieved, or the uploading of information relating to the status of auxiliary contacts.
- 2 digital outputs can be connected to configurable alarms warning of exceeded thresholds (power, current, etc.) or can be remotely controlled.

DIRIS O-ioa

- 2 inputs (4-20 mA) centralise analogue sensors (pressure, humidity, temperature, etc.)
- 2 active outputs (4-20 mA) transmit measurements (power, currents, etc.) to PLCs.

DIRIS O-it

- 3 temperature inputs to be connected to PT100 or PT1000 probes.
- Ambient temperature

DIRIS O-m

- Provides a second RS485 Modbus communication port to the DIRIS B for simultaneous sending of information via RS485 to two supervision stations.

DIRIS O-p

- Adds a PROFIBUS DPV1 communication port to the DIRIS B.

Connections

Associated current sensors

Various types of current sensor are associated with the DIRIS B: solid-core (TE), split-core (TR/iTR) or flexible (TF). This range of sensors can be adapted to all types of new or existing installations. A quick RJ12 connection makes wiring easy and reliable and prevents wiring errors. The rating and type of sensor are recognised automatically by DIRIS B. This makes it possible to ensure overall accuracy of the DIRIS B measurement chain + current sensors.

For further information, see the page on "TE, TR/iTR, TF sensors".
